

Project: Banking Customer Support AI Agent using Multi-Agent Architecture

Overview –

The AI Banking Multi-Agent Customer Support System is an intelligent support automation solution designed using a multi-agent architecture powered by Large Language Models (LLMs).

This project demonstrates:

- Multi-agent coordination
- LLM-powered intent classification
- Automated ticket creation and tracking
- Database integration
- LLMOps evaluation and logging
- Interactive user interface (Streamlit)

Output Screenshot –

The screenshot shows a web application titled "AI Banking Customer Support - Multi-Agent System". It features a "Submit a Message" section with a "Customer Name" field containing "Guest 01" and a message input field with the text "How to apply for credit card?". A "Submit" button is below the input. Below this is a "Classification" section showing "General Banking Query". The "Response" section displays a message: "Dear Guest 01, Thank you for considering our bank for your credit card needs. We're happy to guide you through the application process. Applying for a credit card with us is straightforward and can be completed in a few simple steps. Eligibility Criteria: Before we begin, please ensure you meet our basic eligibility criteria:".

The screenshot shows the same web application. The "Submit a Message" section has the "Customer Name" field containing "Guest 01" and the message input field containing "My netbanking login not working". The "Submit" button is below the input. Below this is a "Classification" section showing "Complaint". The "Response" section displays a message: "We apologize for the inconvenience. A new ticket #827741 has been generated, and our team will follow up shortly." Below the response is a "View Support Tickets" link.
